

## ADJUSTABLE AND FOLDABLE LEVER

If you cannot decide between the short or long version, our adjustable in length and foldable model is, in our opinion, the perfect compromise. It will offer the comfort of a long lever with the nice look of a short one.

The first advantage for this flip up lever, compared with our two other models, is that it is adjustable in length. At the minimum setting, it will be 2 little centimeters longer than the short lever. And once at its full length, it will be 2cm longer than the long lever. Simply said, whether you want to use 2, 3 or 4 fingers on the lever and thanks to this length adjusting function, this model will adapt to your needs and riding habits.

To adjust the dimension, it is as easily done as said since you only need to unscrew a small screw to make the lever's end slide freely, until you find and set it at the right length for you (within the 3,5cm setting distance allowed by the adjustable part).

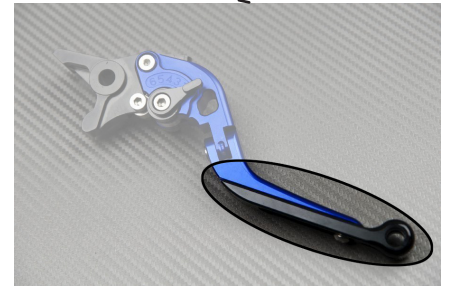

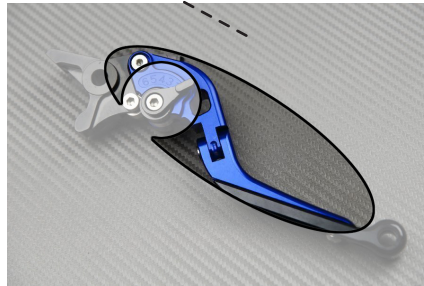

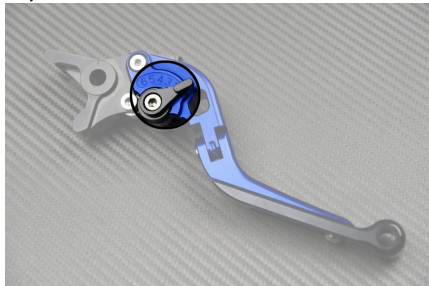

In addition to its undeniable aesthetics compared to the OEM models, our lever is also equipped with a 6 positions dial, allowing you to adjust the distance between the lever and your handlebars' grip at will, making it suitable for all hands' sizes.

Also, and since tastes and colors are always a personal matter, we propose a certain liberty of choice for your levers' colors : indeed over 500 combinations are possible !

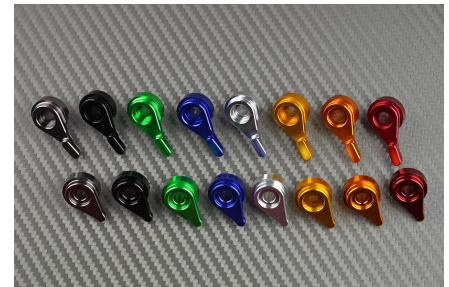

You have a free choice for the color customization of :

- The 6 positions gap adjusting dial
- The lever's end (the bar adjusting in length)
- The lever's body (main part)

For each of these parts, 8 colors are available :

- Black
- Silver
- Titanium
- Red
- Blue
- Gold
- Orange
- Green

As you can see, the length adjustment and foldable functions are not the only advantages this lever has to offer since it will also allow you to combine one, two or even three colors on the same lever, depending on your tastes.

Some color variations are already proposed in the drop down menu on the product page. If the combination you want for your lever is not proposed in this menu (notably for the lever end part's color), you simply need to precise the colors you want in the comment when passing your order. In which case, to avoid misunderstandings and to simplify the processing of your order, please clearly specify the colors you want in the following manner :

Lever body color : *silver* / Lever dial color : *blue* / Lever end color : *red*

For your comfort, and to guarantee your satisfaction, know that our levers' anodizing is guaranteed for 1 year.

And finally, in addition to these numerous advantages, our levers are an integral part of our AVDB Line, that we invite you to discover more in details in the "Our Ranges" tab.
